The finest contour of a female face, the sweetest amile of a female mouth loses something if the head is crowned with scant hair. Scant and falling hair, it is now known, is caused by a parasite that burrows into the scalp to the root of the hair, where it saps the vitality. The little white scales the germ throws up in burrowing are called dandruff. To cure dandrum permanently, then, and to stop falling hair, that germ must be killed. Newbro's Herpicide, an entirely new re-sult of the chemical laboratory, destroys the dandruff germ, and, of course, stone the falling hair, and prevents baldness. Sold by leading druggists.
